

Integrated Security Technical Engineer

*Commissioning, installation and support of high-end security infrastructure * Large, complex projects internationally * Lenel / C-Cure / Genetec (cross-training available)*

Constantly evolving

Since the company started in 1996, Evolution has embraced (and contributed) technologies that have changed the face of enterprise security, CCTV and access control infrastructure.

It's helped us become one of the largest independent systems integrators in the industry, specialising in large, complex, often Higher Security / multi-site installations.

We protect the critical assets of a large, loyal and ever-growing list of clients, including government agencies, high tech leaders, industrials and Blue-Chip multinationals.

This translates into terrific projects for our technical teams - and an exciting opportunity for you if you choose to join us now.

The people who started Evolution still privately own and run it. We reinvest a lot of our profits into R&D, facilities and people. Which means we, and you, can do great engineering.

If you're interested in a move and this sounds appealing, please do get in touch.

The role

You'll be contributing your technical know-how to projects taking place throughout the UK and across Europe. Most of your work will be on-site, and could include regular overseas travel.

Here are the key points:-

- Commissioning, service and repair of large-scale integrated access control and IP CCTV systems.
- Supporting the installation and projects teams with system design, delivery and handover from a technical perspective including the networking infrastructure.
- Provide technical advice and coordination, working with clients, manufacturers, software suppliers and our local approved contractors
- Troubleshooting system faults (on-site or using remote diagnostics)
- Working with our R&D team to suggest new developments

You

We're looking for a capable all-round commissioning and installation engineer with a solid background in medium to large scale IP security, CCTV and access control infrastructure.

You must be willing to travel overseas regularly, sometimes for extended periods (but with regular paid flights back home)

MCP, MCSE, SQL Server and TCP/IP knowledge and qualifications would be extremely useful, but we will cross-train you if you've used similar technologies.

Most of our work involves Lenel, C-Cure and Genetec systems. Again, we'll cross-train you if necessary.

Prospects and rewards

There are around 160 people in Evolution, so you won't be lost in the crowd and we're always ready to listen to how you'd like to develop your career with us.

We've recently refurbished and extended the training academy at our HQ. This provides a variety of in-house and manufacturer courses to keep you moving forward.

The rewards include private healthcare insurance, vehicle / allowance, company doctor, overtime, along with generous travel allowances and expenses.

For further information
